Education

St. Teresa School

2010 – 2024

Indian Institute of Technology, Roorkee

2024 – 2028

B.Tech in Electrical Engineering

Experience

Machine Learning Engineer Intern | *Infigro.ai*

July 2025 – Nov 2025

- Built a Data Analysis Agent capable of interpreting Bar Charts and Trendline Data for automated insights generation.
- Worked extensively on Data Interpretation and Analysis pipelines to extract meaningful patterns from visual data representations.

Research Intern | *Electrical Engineering Department, IIT Roorkee*

Dec 2024 – Jan 2025

- Research focused on the intersection of Control Systems and Cybersecurity, advanced control strategies to enhance the security and resilience of cyber-physical systems.
- Worked on Arduino, Matlab to simulate various types of attacks on cyber-physical systems.
- Devised new strategies to mitigate different kinds of cyber attacks on cyber-physical systems.

Projects

HireSense

[GitHub](#) 

- Developed an NLP-based Candidate Selection Model designed to parse resumes and job descriptions using fine-tuned NER models.
- Built resume and job description parsing modules based on NLP/NER techniques and calculated similarity scores from extracted feature vectors.
- Tools Used: Python, Natural Language Processing, fine-tuned NER, Git.

InVisionDX

[GitHub](#) 

- Developed Web2-integrated disease prediction models based on Computer Vision and Convolutional Neural Networks, achieving over 95% accuracy.
- Incorporated several CNN-based models for predicting diseases such as COVID-19, Pneumonia, Tuberculosis, Lung Cancer, and Alzheimer's disease from visual data.
- Tools Used: Python, PyTorch, Flask, Computer Vision, CNNs, HTML, CSS, JavaScript.

ERP API Automated Framework

[GitHub](#) 

- Developed an ERP Management System designed for high-performance handling and visualization of ERP-style datasets.
- Developed various data analysis modules to extract valuable information from datasets and visualize them in a comprehensive manner.
- Tools Used: Python, Flask, JavaScript, HTML, CSS, Git.

Adobe Problem Statement – Photo Editing App *4th Place*

InterIIT Tech Meet 14.0

- Developed a photo editing application featuring automated editing capabilities powered by Computer Vision techniques.
- Implemented intelligent image processing pipelines enabling context-aware, automated photo enhancements and edits without manual intervention.
- Secured **4th position** among all IITs in the Adobe problem statement at InterIIT Tech Meet 14.0.
- Tools Used: Python, Computer Vision, image processing, PyTorch.

Key Courses Taken

Mathematics: Linear Algebra, Probability and Statistics, Numerical Methods, Optimization, Calculus

Other Relevant Courses: C++ Programming, Machine Learning, Deep Learning

Positions of Responsibility

Core Member: Data Science Group , IIT Roorkee

Jan 2025 - Present
